#### DETAILED ACTION

Claims 80-136 are pending in this application.

#### Information Disclosure Statement

The information disclosure statement (IDS) submitted on June 4, 2008 was noted and the submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statement.

## Action Summary

Any rejections of record that are not repeated below are considered withdrawn.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 80, 82, 840149 and 167-186 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicants use the phrase "greater than or equal to" in the claims when describing the ratio of (water + polyol) to oil; the silicone oil (claim 102); the total content of the solid particles (claim 175). It is unclear to the examiner if it is "greater than" or "equal to" are the intended values.

Art Unit: 1616

## Response to Arguments

Examiner has withdrawn the rejection of record in lieu of the above rejection.

### Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPC2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPC 645 (Fed. Cir. 1985); In re Van Omum, 686 F.2d 937, 214 USPC 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a teminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 80, 82, 84-149 and 167-186 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12, 15 and 18-99 of U.S. Patent No. 10/603,698. Although the conflicting claims are not identical, they are not patentably distinct from each other because both copending applications are directed to a water-in-oil foundation comprising at least one oil, an aqueous phase, a copolyol and a coloring material. The difference between the instant invention and the copending application is the weight percentages and concentrations of the components.

This determination would have been made through routine experimentation to achieve the desired results of the claimed invention. This is in the absence of any clear showing of unexpected results attributable to the specific concentrations of the components employed by applicant in the instant case.

# Response to Arguments

Applicants request that the examiner holds the rejection in abeyance until there is an indication of allowable subject matter. The examiner can grant this request, the double patenting rejection is maintained and a terminal disclaimer is require to overcome the rejection.

### Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 80, 84-117, 124-130, 140-149, 175, 176 and 178-186 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hanna et al. (US 5,843,417) in view of Elm et al. (US 4,552,753).

Applicant claims a water-in-oil foundation comprising at least one oil, an aqueous phase containing water and at least a water-miscible polyol and a dyestuff.

Art Unit: 1616

# Determination of the scope and content of the prior art (MPEP §2141.01)

Hanna et al. disclose a water-in-oil emulsion comprising a water phase and an oil phase. The composition further contains a particle, surfactant, polymer and other ingredients that are common to cosmetic compositions (col. 1, line 49 through col. 2, line 13). Column 2, line 62 through column 3, line 44 teach the oil is a hydrocarbon-based oil such as isododecane and may also contain linear and cyclic silicone oils and the oil is in the emulsion at a concentration of 10-55 wt. %. Column 3, lines 45-67 teach that the emulsion can contain between 1-20 wt.% of pigment particles. Column 4, line 56 through column 5, line 10 teach that the emulsion can contain a surfactant such as dimethicone copolyol in a concentration of 5-15 wt. %. Column 6, lines 9-32 teach additional ingredients that are common to cosmetic compositions such as clays, propylene glycol, etc. in a concentration of 0.1 to 10 wt. %. The example in column 7, lines 24-53 also disclose the claimed invention.

# Ascertainment of the difference between the prior art and the claims (MPEP §2141.02)

Hanna et al. do not teach the claimed concentration of the ingredients, the viscosity of the composition and the specific volatile silicone oils as claimed by applicant. It is for this that Elm et al. is joined.

Elm et al. disclose in column 2, lines 32-68 examples of cyclic and linear volatile silicone oils that are common for use in cosmetics. Examples of these are Dow Corning 344 (octamethylcyclotetrasilioxane/decamethylcyclopentasiloxane), Dow Corning 345

Art Unit: 1616

(decamethylcyclopentasiloxane/dodecamethylcyclohexasiloxane) or Dow Corning 200 (hexamethyldisiloxane), etc.

# Finding of prima facie obviousness Rational and Motivation (MPEP §2142-2143)

It is within the ability of one of ordinary skill in the art to adjust the viscosity and concentration of the ingredients in the composition to arrive at the desired formulation through routine experimentation. This is in the absence of any clear showing of unexpected results attributable to the specific concentrations of the specific ingredients and viscosity of the composition employed by applicant in the instant case.

With respect to the specific silicone oils as claimed by applicant, it would have been obvious to one of ordinary skill in the art to look to the teachings of Elm et al. for examples of linear and cyclic volatile silicone oils that are commonly used in cosmetics. One would expect a reasonable chance of success as Hanna et al. describe broadly that cyclic and linear silicone oils are suitable for use in the invention.

### Response to Arguments

Applicant's arguments filed June 4, 2008 have been fully considered but they are not persuasive.

Applicant argues that Elm teaches a process for making a roll-on composition comprising volatile oils, non-volatile oils, etc. It is argued that the compositions of Elm are not water-in-oil emulsions. The examiner agrees, however, Elm is relied upon to

Art Unit: 1616

teach examples of cyclic and linear volatile silicone oils that are common for use in cosmetics. As mentioned above, Hanna teaches that the composition may also contain linear and cyclic silicone oils.

Applicant argues that the absence of silicone oils is preferred in Hanna. The examiner disagrees. Lines 43-44 of column 3 states that the absence of silicone oils is another (emphasis added) preferred embodiment. This means that in addition to a composition comprising silicone oils, a composition that is absence of silicone oils can be made too.

Applicant repeats that that composition of Hanna and Elm has different forms.

Examiner again states that Elm is relied upon to teach examples of the cyclic and linear volatile silicone oils that are common for use in cosmetics.

### Conclusion

Claims 80, 82, 84-149 and 167-186 remain rejected.

# Telephone Inquiries

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Konata M. George, whose telephone number is 571-272-0613. The examiner can normally be reached from 8:00AM to 6:30PM Monday to Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor. Johann R. Richter, can be reached at 571-272-0646. The fax phone

Application/Control Number: 10/784,909 Page 8
